10/604,257

- 1. (Currently Amended) A screen printing nozzle comprising:
 - a nozzle body;
 - a first <u>rubber</u> layer on said nozzle body;
- a second <u>rubber</u> layer on said first <u>rubber</u> layer, wherein said second <u>rubber</u> layer includes a contact surface adapted to contact a stencil mask, and wherein said first <u>rubber</u> layer has a lower durometer than said second <u>rubber</u> layer; and

an opening through said nozzle body, said first <u>rubber</u> layer, and said second <u>rubber</u> layer, wherein said opening is adapted to allow material to flow through said screen printing nozzle to said stencil mask.

- 2. (Currently Amended) The screen printing nozzle in claim 1, wherein said first <u>rubber</u> layer is softer than said second <u>rubber</u> layer.
- 3. (Currently Amended) The screen printing nozzle in claim 1, wherein said second <u>rubber</u> layer is more abrasion resistant than said first <u>rubber</u> layer.
- 4. (Currently Amended) The screen printing nozzle in claim 1, wherein said first <u>rubber</u> layer provides additional flexibility to said second <u>rubber</u> layer.
- 5. (Currently Amended) The screen printing nozzle in claim 1, wherein said first <u>rubber</u> layer and said second <u>rubber</u> layer comprise an insert held within said body.

10/604,257

- 6. (Currently Amended) The screen printing nozzle in claim 1, wherein said first <u>rubber</u> layer is bonded to said body and said second <u>rubber</u> layer is bonded to said first <u>rubber</u> layer.
- 7. (Currently Amended) The screen printing nozzle in claim 1, wherein said first <u>rubber</u> layer and said second comprise one of: polyurethane, polymeric material, graphite filled plastics, and other engineered plastics.
- 8. (Currently Amended) A screen printing nozzle comprising:
 - a nozzle body;
 - a first <u>rubber</u> layer on said nozzle body;
- a second <u>rubber</u> layer on said first <u>rubber</u> layer, wherein said second <u>rubber</u> layer includes a contact surface adapted to contact a stencil mask, and wherein said first <u>rubber</u> layer is softer than said second <u>rubber</u> layer; and

an opening through said nozzle body, said first <u>rubber</u> layer, and said second <u>rubber</u> layer, wherein said opening is adapted to allow material to flow through said screen printing nozzle to said stencil mask.

- 9. (Currently Amended) The screen printing nozzle in claim 8, wherein said first <u>rubber</u> layer has a lower durometer than said second <u>rubber</u> layer.
- 10. (Currently Amended) The screen printing nozzle in claim 8, wherein said second <u>rubber</u> layer is more durable than said first <u>rubber</u> layer.

- 11. (Currently Amended) The screen printing nozzle in claim 8, wherein said first <u>rubber</u> layer provides additional flexibility to said second <u>rubber</u> layer.
- 12. (Currently Amended) The screen printing nozzle in claim 8, wherein said first <u>rubber</u> layer and said second <u>rubber</u> layer comprise an insert held within said body.
- 13. (Currently Amended) The screen printing nozzle in claim 8, wherein said first <u>rubber</u> layer is bonded to said body and said second <u>rubber</u> layer is bonded to said first <u>rubber</u> layer.
- 14. (Currently Amended) The screen printing nozzle in claim 8, wherein said first <u>rubber</u> layer and said second <u>rubber</u> layer comprise one of: polyurethane, polymeric material, graphite filled plastics, and other engineered plastics.
- 15. (Currently Amended) A screen printing nozzle comprising:
 - a nozzle body;
 - a first <u>rubber</u> layer on said nozzle body;
- a second <u>rubber</u> layer on said first <u>rubber</u> layer, wherein said second <u>rubber</u> layer includes a contact surface adapted to contact a stencil mask, and wherein said second <u>rubber</u> layer is harder and thinner than said first <u>rubber</u> layer; and

an opening through said nozzle body, said first <u>rubber</u> layer, and said second <u>rubber</u> layer, wherein said opening is adapted to allow material to flow through said screen printing nozzle to

said stencil mask.

- 16. (Currently Amended) The screen printing nozzle in claim 15, wherein said first <u>rubber</u> layer has a lower durometer than said second <u>rubber</u> layer.
- 17. (Currently Amended) The screen printing nozzle in claim 15, wherein said second <u>rubber</u> layer is more durable than said first <u>rubber</u> layer.
- 18. (Currently Amended) The screen printing nozzle in claim 15, wherein said first <u>rubber</u> layer provides additional flexibility to said second <u>rubber</u> layer.
- 19. (Currently Amended) The screen printing nozzle in claim 15, wherein said first <u>rubber</u> layer and said second <u>rubber</u> layer comprise an insert held within said body.
- 20. (Currently Amended) The screen printing nozzle in claim 15, wherein said first <u>rubber</u> layer is bonded to said body and said second <u>rubber</u> layer is bonded to said first <u>rubber</u> layer.
